SUMMARY

Driven by a strong interest in AI, Machine Learning, and DevOps, with a focus on efficient workflows and scalable infrastructure. Eager to contribute to innovative engineering teams by solving real-world problems through automation and intelligent systems.

SKILLS

- Programming Languages: Python
- AI & ML : Langchain, LangGraph, RAG, Agents, TensorFlow, PyTorch, Hugging Face Transformers, Embedding Models, Vector Databases, FAISS, Deep Learning, NLP
- Backend & APIs: FastAPI, REST API, Streamlit, Gradio
- Cloud & DevOps: AWS, Docker, Kubernetes, GitHub Actions
- Databases: MySQL, MongoDB
- Tools & Platforms: Git, Linux, Hugging Face

INTERNSHIP EXPERIENCE

Feb 2026 - Apr 2026

SourceSys Technologies Private Limited

- Developed a GenAI-based resume screening application using LangChain and Meta Llama 3.3 70B.
- Used sentence embeddings (all-MiniLM-L6-v2) to match and rank resumes against job requirements.
- Deployed the application on Hugging Face Spaces and monitored LLM workflows using LangSmith.

PROJECTS

Self-Healing Retrieval System for Evidence-Grounded AI

- Architected a multi-agent RAG pipeline for accessory compatibility intelligence using FAISS, HuggingFace embeddings, and Groq LLMs, implementing self-healing retrieval with query rewriting and multi-stage fallback search for evidence-grounded responses.
- Designed a confidence scoring and hallucination prevention system using weighted source trust ranking and citation verification, ensuring all technical claims were validated against retrieved evidence before generation.
- FastAPI + Gradio application with FAISS-based retrieval and structured observability logging.

DeepSecure-AI: Deepfake Detection Tool

- Developed a multimedia deepfake detection system using MTCNN for face detection and EfficientNetV2 for classification.
- Performs frame-by-frame analysis with a Gradio interface for real-time detection of fake images and videos.

Barber-Shop Booking App

- Built a Node.js and MySQL; Dockerized and containerized locally using Minikube with Kubernetes
- Deployed to AWS via ECS Fargate, leveraging ECR, S3 + CloudFront, RDS, and VPC
- Integrated with GitHub Actions for fully automated CI/CD pipelines

EDUCATION

B.Tech in Artificial Intelligence and Machine Learning

Bannari Amman Institute Of Technology, Sathyamangalam.

Year of Completion: 2026

Secured CGPA: 7.6

Vivekam Metric Higher Secondary School, Coimbatore

- SSLC: 85%
- HSC: 84%

CERTIFICATION

- AWS Certified Cloud Practitioner - 2025-28
- Google Cloud Fundamentals: Core Infrastructure - 2025
